

DRIVELINE & DURASHOCK HELPS TRITON OWNERS DISCOVER INCREASED DRIVEABILITY

Driveline Services Australia – the underbody and power transmission specialists, has developed a package of modifications to transform your **Mitsubishi Triton** into the ultimate driving machine.

This is where the single piece driveshaft works together with the Durashock shocks and springs to deliver the ultimate raised vehicle driving experience.

Durashock Suspension Systems is Driveline Services' own brand of heavy duty suspension products, specifically designed for the tough Australian conditions.

Featuring tough twin-tube designs, precision engineered 18mm hardened chrome piston rods and heat resistant triple lip seals, the Durashock range of gas-charged highperformance 4WD shock absorbers deliver greater comfort on every surface. The Durashock range currently extends to most models of popular 4WD vehicles, including all current Triton models, and some passenger vehicles.

The single piece Triton shaft is another Driveline Services custom-made creation, made to measure from cold drawn seamless high-tensile steel, coupled with high quality componentry, hand built and computer balanced for long lasting performance.

Put together, these products make an unbeatable package giving noticeably improved driveability on any Mitsubishi Triton.

In good news for drivers of other vehicles, since driveline shudders are not just restricted to lifted Tritons, Driveline Services are continuing to develop similar innovative solutions to allow comfortable modifications to a growing range of modern vehicles.

So there's no need to avoid modifications to your vehicle for fear of less driveability – just make sure you first seek the expert advice of Driveline Services to ensure the integrity of your vehicle's underbody is protected.

Established in 1982, Driveline Services Australia is an Australian owned and operated company that designs, manufactures, re-manufactures and repairs a comprehensive range of driveshaft, front wheel drive, steering and suspension componentry and provides specialist technical support and first class service to wholesalers, distributors, resellers, dealers, workshops, repairers, retailers and members of the public throughout Australia and the South Pacific.

Driveline Services Australia employs more than 90 staff and offers workshop and wholesale warehouse facilities across seven branches throughout Australia, including; Mackay, Brisbane North, Brisbane South and Townsville, Queensland; Newcastle, New South Wales; Melbourne, Victoria, and Perth Western Australia.

In addition to its branded branches, the Driveline Services Group also operates a further two independently branded businesses including; Dubbo Diff & Driveline, New South Wales; and Universal Driveshaft Services, Victoria; and manages two primary consumer brands including, Durashock Suspension Systems, and Drive Pro.
